

John Bunker Sands Wetland Center

2020 Fall Virtual Programming

Live From the Wetland!

Choose from two programs. Program includes interactive materials for students to use during the virtual class.

Macroinvertebrates... More than Meets the Eye - Start in the field with one of our team members, learning where and how to collect macroinvertebrates and their role in the ecosystem. Head back to the lab where another team member will be ready and waiting with macroinvertebrate samples under the microscope. Students will get an up close and personal look at the macros, learn their structure and how they help determine water quality.

Phytoremediation... The Key to Water Quality - Head into the field with our team members, taking a closer look at the plants of the wetland and how they impact water quality. By collecting plant samples and taking a closer look at their structure and root system, students will understand the importance of phytoremediation and its relationship to water quality. Water quality testing will be done in the field, with data analysis done upon completion of testing. Water quality testing supplies can be sent to your school for an additional cost to allow your students to test their water source while the team member tests the wetland water for comparison.

Program are \$75.00 each. Students will be able to record all data collected during the program through links that will be available to the teacher. To schedule a program or get more information, contact Linda Dunn at ldunn@wetlandcenter.com or call 972-474-9100

“What’s Up in the Wetland” Chat

Would your students benefit from talking to a professional at the wetland? We would like to offer your class a 20 minute "What's Up in the Wetland" chat to answer any questions they may have as a pre/post tutorial. This is not a field investigation, but a sit down virtual chat with one of our team members. This comes at no cost to you. However, we ask if you can give a donation to the Center, it would be much appreciated.

To schedule a **Wetland Chat** Contact Linda Dunn at ldunn@wetlandcenter.com or call 972-474-9100
