

The John Bunker Sands Wetland Center offers some great badge workshops for Girl Scouts:

Bugs Badge (Brownies grades 2-3): During this 2-hour workshop, scouts will learn insect terminology, review complete and incomplete metamorphosis, and discuss the roles of insects in our ecosystem. This hands-on program includes a guided walk on the boardwalk to look for insects residing at the wetland as well as a fun take-home craft relating to insect life cycles.

Wonders of Water Badge (Brownies grades 2-3): During this 5-hour workshop, scouts will learn about watersheds, the urban water cycle, wetland ecology, and water treatment. This hands-on extensive program includes water filtration devices, running a relay, and investigating the macroinvertebrates in the wetland water.

Animal Habitats Badge (Juniors grades 4-5): During this 2-hour workshop, scouts will learn what makes a habitat, types of habitats in the world, and the habits and residents of the wetland. This program includes a fun craft and a guided walk to investigate the wetland.
